

## Office 365 Security Assessment

A security event can be detrimental to your business' bottom line. Secure and monitor your Office 365 environment to guarantee all of your data and information is protected.

**\$3,495.00**

*\*Quarterly maintenance available*

### What We Do

We work together to determine your security score and detect just how secure your current Office 365 environment is. In doing this, we uncover who has access to your Office 365 internally and externally, expose any ransomware and/or malware, identify any compromised account credentials, and more.

### How We Do It

Our Microsoft Gold Certified experts utilize Microsoft Secure Score to gather security insights and determine what security controls within Office 365 are currently being utilized.

### Deliverables

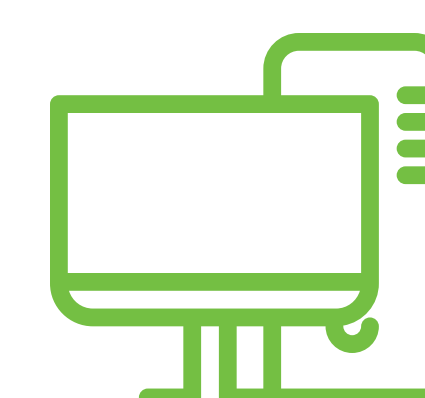

#### Security Remediation Roadmap

- Current Microsoft Secure Score summary
- List of remediation recommendations
- Ranking of severity & prioritization of remediation items
- Recommended quarterly update program

#### Step 1

Execute an assessment and analysis of your current infrastructure to gain a mutual understanding of cloud security objectives and requirements.

#### Step 2

Provide your Microsoft Secure Score with tailored recommendations & best practices to successfully implement Office 365 security features.

#### Step 3

Deliver a roadmap of Office 365 security capabilities for your unique security objectives and requirements that will improve your Secure Score and your overall security posture.

Gold  
**Microsoft Partner**

*It takes 4 minutes for the average hacker to gain access to your system via an email attack. Average time to direct intrusion is 286 days. Add another 80 days of damage control and you've wasted a year fighting off attacks.*
